FRONTEND REVIEW REPORT

Project: Inventory and Sales System – MADECOR
Review Date: 24-02-2025
Development Team: "Three Musketeers"
Client Attendees: Cesar Iván Pabón Portilla – General Manager of MADECOR

---

1. Introduction

This report documents the review of the frontend for the MADECOR Inventory and Sales System. During the meeting, the client tested the system's interface, evaluating navigation, ease of use, and the arrangement of visual elements.

The goal of this review was to identify areas for improvement in the user experience before the final project presentation.

2. Observations and Requested Improvements

After evaluating the frontend, the client provided the following observations and improvement suggestions:

1. **Clarity in Information Display:**
   o Increase the font size in the reports and invoicing section to improve readability.
   o Improve the contrast of some button colors to make them more visible.
2. **Intuitive Navigation:**
   o Reorganize the menus so that sales and inventory options are more accessible from the main screen.
   o Add a "Home" button on all pages to allow users to easily return to the main screen.
3. **Product Display:**
   o Display more products per row in the online store to better utilize screen space.
   o Add a category filter to help customers find products more quickly.
4. **Registration and Login Forms:**
   o Simplify the registration form by removing non-essential fields.
   o Improve error messages so users know exactly what information needs correction.
5. **Invoicing and Purchase Confirmation:**
   o Ensure that after completing a purchase, a clearer confirmation message is displayed, including an order summary.
   o Add a button to download the invoice directly from the purchase confirmation screen.

3. Conclusion and Next Steps

The identified improvements will help optimize the user experience within the system. The following action plan has been established:

1. Adjust text sizes and improve button visibility.
2. Reorganize the menu structure to enhance navigation.
3. Improve product display and search functionality.
4. Simplify the registration form and enhance error messages.
5. Improve the purchase confirmation process and add an invoice download option.

Once these improvements are implemented, a follow-up review will be scheduled with the client before the final system presentation.
